ACAD-27 a)	Shri Ramdeobaba College of Engineering and Management, Nagpur -440013	Iss. No.: 01, Rev. No.: 00
Ref. Clause(s): 9.1		Date of Rev: 01/01/2018
Department: Information Technology (IT)	Semester: V Course Code: HUT5001 Course Name: Organizational Behaviour	Page: 01/02
Programme: B.Tech.	Test I- MODEL ANSWER	Date of Exam: 08/09/2025
Max Marks: 20	Session: 2025-26	Time: 2:30 PM - 3:30 PM

Instructions:

- Choice based question: Q.3 (b)
- Due credit will be given to neatness and adequate explanations.

Q.No	Description of Question	Marks	CO	EO
Q.1 (a)	MotoCorp is a manufacturing firm where managers emphasize authority, close supervision, and strict discipline. Employees enjoy job security but report low motivation and lack of creativity. Based on the scenario, answer the following questions:	**03**	**CO 1**	**L1, L2, L4**
	i. Identify and define the OB model MotoCorp is following. **(1 mark)** MotoCorp is following the **Custodial Model** of Organizational Behaviour. This model is based on the economic resources of the organization, where employees' needs for security and welfare are fulfilled. Managers focus on providing job security and benefits, which results in employees' dependence on the organization rather than on managerial authority alone.			
	ii. What are the advantages and disadvantages of this model? **(1 mark)** **Advantages:** Provides job security and stable employment. Creates a sense of loyalty and dependence on the organization. Reduces resistance to authority, as employees feel secure. **Disadvantages:** Employees may feel passive and dependent, leading to low motivation and creativity. Lack of challenge and empowerment can reduce innovation and initiative. Productivity may remain at a mediocre level.			
	iii. Suggest a shift to a more suitable OB model and justify your choice. **(1 mark)** MotoCorp should shift to the **Supportive Model.** This model emphasizes leadership, motivation, and participation, rather than just authority or security. It encourages employee involvement, creativity, and job satisfaction. By empowering employees and valuing their contributions, the organization can move from passive cooperation to active engagement and higher productivity.			
				L1,

(b)	Define Organizational Behaviour. Explain the scope of Organizational Behaviour with example. **Definition:** Organizational Behaviour is a field of study that investigates the impact that individuals, groups, and structure have on behaviour within organizations, for the purpose of applying such knowledge toward improving an organization's effectiveness. Scope: **Individual Behaviour:** Focuses on personality, perception, learning, values, attitudes, and motivation of employees. Example: Understanding why one employee is highly motivated while another shows apathy. **Group Behaviour:** Studies group dynamics, leadership, teamwork, communication, conflict, and decision-making. Example: How team spirit and effective communication improve performance in a project team. **Organizational System:** Examines the structure, culture, power, politics, and overall processes of the organization. Example: A flat organizational structure encouraging innovation versus a hierarchical structure emphasizing discipline. **Organizational Change and Development:** Deals with managing change, stress, innovation, and organizational development programs. Example: Training employees to adapt to digital transformation initiatives.	**03**	**CO 1**	**L2**
Q.2 (a)	Represent Maslow's Hierarchy of Needs with a detailed pyramid diagram.  	**02**	**CO 2**	**L1, L6**
(b)	Briefly explain the three components of attitude? Attitude is a learned predisposition to respond positively or negatively toward a person, object, or situation. It has three components: **Cognitive Component:** Refers to the beliefs, thoughts, or knowledge a person has about something. Example: "Working in a team increases productivity." **Affective Component:** Refers to the emotions or feelings a person has toward something. Example: Feeling happy and motivated when assigned a challenging project. **Behavioural Component:** Refers to the intent to act or observable actions based on beliefs and feelings.	**03**	**CO 2**	**L1, L2**

	Example: Actively participating in team discussions or offering help to colleagues.			
(c)	Imagine you are a manager of a manufacturing team. Half your employees constantly look for guidance, while the other half show initiative and creativity. **Questions:**	**03**	**CO 2**	**L2, L3, L4, L5**
	i. If you apply only Theory X to the whole team, what will happen? **(1 mark)** Theory X assumes employees are lazy, need constant supervision, and avoid responsibility. Applying it to the entire team would demotivate the self-motivated, creative employees, stifle initiative, and reduce overall productivity.			
	ii. If you apply only Theory Y, what risks might occur? **(1 mark)** Theory Y assumes employees are self-motivated, responsible, and enjoy work. Applying it to the dependent employees who require guidance may lead to confusion, mistakes, and lack of discipline, as they may struggle without clear supervision.			
	iii. As manager, how will you balance your leadership style between Theory X and Y? **(1 mark)** Use an adaptive approach: Apply Theory X management (close supervision, clear instructions) to employees who need guidance. Apply Theory Y management (delegation, empowerment, encouragement of creativity) to self-motivated employees. This approach maximizes productivity while maintaining motivation and creativity across the team.			
Q.3 (a)	Suggest four organizational practices that can help employees with low self-esteem gain confidence. **Training and Skill Development:** Provide workshops, on-the-job training, and mentorship programs to help employees gain competence and feel capable. **Positive Feedback and Recognition:** Regularly acknowledge achievements, effort, and improvement to reinforce self-worth. **Assigning Challenging but Achievable Tasks:** Gradually increasing responsibility helps employees experience success and build confidence. **Encouraging Participation in Decision-Making:** Involve employees in team discussions and decisions to make them feel valued and capable. **Mentoring and Coaching:** Pair employees with experienced mentors who can guide, encourage, and provide constructive feedback. **Creating a Supportive Work Environment:** Promote open communication, collaboration, and psychological safety, so employees feel comfortable taking initiatives without fear of criticism. **Celebrating Small Wins:** Recognizing incremental progress helps employees see their growth and reinforces self-confidence.	**02**	**CO 3**	**L1, L2**
(b)	Create a personality profile of an ideal IT Project Manager by combining the Big Five Personality traits, Locus of Control, and key dimensions of Emotional Intelligence (EI). Personality Profile of an Ideal IT Project Manager	**04**	**CO 3**	**L1, L3, L4, L5,**

	1. Big Five Personality Traits **Openness to Experience: High** Willing to explore innovative solutions, adapt to new technologies, and embrace creative problem-solving. **Conscientiousness: Very High** Organized, dependable, detail-oriented, and capable of delivering projects on time. **Extraversion: Moderate to High** Effective in communication, motivating team members, and stakeholder management without being overly dominant. **Agreeableness: High** Cooperative, supportive, and able to maintain positive team relationships while resolving conflicts diplomatically. **Neuroticism (Emotional Stability): Low** Calm under pressure, resilient to stress, and able to make rational decisions in challenging situations. **2. Locus of Control** **Internal Locus of Control: High** Believes outcomes depend on their own actions, takes responsibility for project success, and proactively addresses challenges. **3. Key Dimensions of Emotional Intelligence (EI)** **Self-Awareness:** Recognizes own strengths, weaknesses, and emotions to manage behavior effectively. **Self-Regulation:** Maintains composure, handles stress, and responds thoughtfully rather than reactively. **Motivation:** Intrinsically driven to achieve goals, inspire the team, and pursue continuous improvement. **Empathy:** Understands team members' perspectives and needs, facilitating better communication and conflict resolution. **Social Skills:** Builds strong relationships, influences stakeholders, negotiates effectively, and fosters teamwork. **Summary:** An ideal IT Project Manager is organized, adaptable, and responsible, maintains emotional stability under pressure, communicates effectively, motivates the team, and takes proactive control of project outcomes while showing empathy and collaborative leadership.			**L6**
	OR			
	DataPulse Solutions, an IT services firm, recently promoted Trisha, a senior developer, to Project Manager. **Personality Profile:** She prefers structured work and innovation but struggles in networking and motivating large groups. **Self-Esteem:** While highly skilled, Trisha doubts her leadership abilities. She often second-guesses her decisions, especially when senior managers challenge her. **Locus of Control:** She believes that her hard work and planning will determine the project's success, not luck or external circumstances. **Emotional Intelligence:** Trisha demonstrates good self-awareness and self-regulation. However, she finds it difficult to handle conflicts within her team, which consists of both extroverted and introverted personalities.		**CO 3**	**L1, L2, L4, L5**

	Recently, the project hit delays due to team conflicts. Some members feel micromanaged, while others appreciate her structured style. Senior management is now monitoring her performance closely. Considering Trisha's personality profile (Big Five traits), self-esteem, locus of control, and emotional intelligence:			
	i. Identify and explain two strengths that may support Trisha's success as a project manager. **(1 mark)** **Strong Locus of Control (Internal):** Trisha believes that her effort and planning determine project outcomes. This means she is proactive, responsible, and persistent, which is essential for meeting project goals. **Self-Awareness and Self-Regulation (Emotional Intelligence):** She understands her own emotions and maintains composure under pressure, helping her make thoughtful decisions and manage stressful situations effectively.			
	ii. Identify and explain two weaknesses that might hinder her success. **(1 mark)** **Low Self-Esteem in Leadership:** Doubting her leadership abilities and second-guessing decisions, especially under senior management scrutiny, may reduce her confidence and decisiveness, negatively affecting team trust. **Difficulty in Team Networking and Conflict Management:** Struggling to motivate large groups and handle conflicts can lead to team dissatisfaction, micromanagement perception, and project delays, particularly with diverse personality types on the team.			
	iii. Based on these strengths and weaknesses, evaluate whether Trisha is likely to succeed in the long run. Support your answer with three arguments linked to the above concepts. **(2 marks)** **Proactive and Structured Approach:** Her internal locus of control and preference for structured work means she takes ownership and plans effectively, which is a strong foundation for project management success. **Need for Leadership Confidence Development:** Low self-esteem may limit her growth unless she builds confidence through mentorship, feedback, and small leadership wins, enabling her to make decisive and assertive choices. **Importance of Enhancing Emotional Intelligence in Team Management:** To succeed long-term, Trisha must improve social skills and conflict management, leveraging her self-awareness to adapt leadership style to different team members' needs. **Verdict:** Trisha has the potential to succeed due to her planning, responsibility, and self-regulation. Success will depend on her developing confidence and interpersonal skills to manage team dynamics and gain trust.
